# MANAGEMENT OF YOUR NEW RAM

We have done our best to present the best of our annual draft of naturally reared, structurally sound rams for your selection. From now on his management is very much your concern and will influence what his productive life will be in your breeding program.

We wish you every success with your purchase, and being personally interested in his future, may we suggest:

- That you insure your ram(s) for the next 6 months. He will be more susceptible to injury, death and loss of use in this time, than in any other period in his lifetime.
- Place him in a secure paddock away from other rams and unjoined females until mating. Be aware that Brucellosis can be transmitted to rams from recently joined females, as well as sexually active males.
- In the interval before mating feed him well. Remember, semen is manufactured six weeks prior to use. You may choose to supplement his diet with lupins, a proven method of increasing semen quality.  
Also consider the time to elapse before use, as rams work better with a shorter fleece.
- Don't overwork him in his first season. Preferably put him with older ewes.
- After use, treat him well. He is your investment for future years. Give regular drenches, 6-in-1 vaccinations, adequate nutrition and regular physical examinations to help ensure a long, productive life.
